

Instructions

Art-Nr. 5002 Transport box for track gage Z

1. These parts are not suitable for small children.
2. The product can be seen in figure 1. These instructions are part of the product. Please retain them well.
3. This box is suited for transporting rolling stock of the track gages Z and Zm.
4. For smaller vehicles, 10 foam cubes are enclosed in the box. These can be put between the small vehicles to prevent them from shifting, figure 2.
5. Vehicles with damageable installations and pantographs should always be put into the box with the top first. Push the roof of the model carefully into the foamed plastic, then push the undercarriage downwards into the box.
6. This box is suited for transportation only. For storing the models over a longer period of time, it is better to take them out. For the manufacturing of this box, only high quality foamed plastic has been used. Nevertheless, we cannot guarantee that under pressure and over a longer period of time it won't get sticky and stick to the model.
7. Do not keep the box near heat sources or expose it to sunlight.
8. If the box has been closed properly, transport is possible in any position. Anyhow, the best way to transport it is horizontally. Still, of course, an absolute protection from damages cannot be guaranteed.
9. **Legal annotations:**

There is a strong probability that the foamed plastic will get sticky after storing and/or using it over a long period of time, which cannot be prevented.

Even if usually the box with the models inside can be transported in any position, the risk of damages cannot be excluded completely. We do not assume any liability for any damages on any vehicles.

This box has been designed for transporting, not for the storage of model trains.
10. High Tech Modellbahnen manufactures its products with the greatest possible care. We issue a guarantee and warranty according to legal regulation. Should you find any new product you just bought defective, please contact your local dealer.

figure 1: The transport box for track gage Z with 10 foam cubes enclosed

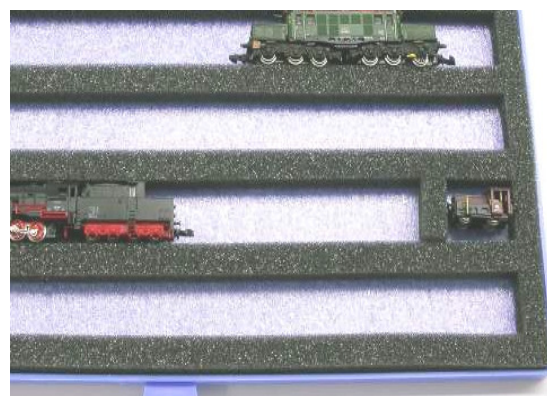

figure 2: An extra protection for the smallest vehicles

figure 3: Put the vehicle into the box with its pantographs first, then carefully push in the wheels – like this nothing should be damaged

Enjoy working with your transport box.
